

METHOD AND DEVICE FOR SELECTING SHADE OF A COLOUR CODING RING

Abstract

The invention concerns a method and a device for determining the sample of a colour coding ring closest to the colour of at least one element of a patient's set of teeth (3). The method is characterized in that it comprises steps which
10 consist in: with imaging means comprising a video camera (1), inputting and freezing on the screen (7) a colour image (7a) of said set-of-teeth element (3), filming the colour coding ring and displaying on the screen (7) the image of at least one sample, such that said image is side by side with the frozen image (7a) of the set-of-teeth element, visually comparing the image (7a) of the set-of-teeth
15 element (3) frozen on the screen (7) and the sample image.
